

Enhanced Capabilities for Zebra Clinical Mobility Solutions

EPIC and other EMR systems continue to leverage mobile technology to improve the efficiency and capabilities of nursing teams. Alairo Solutions offers a simple, effective application and supporting services built for the Zebra ecosystem that optimally delivers alarm notifications.

Alairo Solutions works with Zebra partners to improve the utility, adoption and customer satisfaction around Clinical Mobility solutions.

To fully integrate mobile devices into the hospital environment requires knowledge of clinical workflows as well as hospital communication systems.

Alairo Solutions brings 32 years of clinical expertise around workflows, usage models, and alarm management as well as technical integration with hospital clinical communications.

Simple, efficient
Clinical Alarm
Notification and
Communications

**Duress Button
Support**
on back

Activation of the duress button routes a high priority alert to security and designated functions

Enable your customer to avoid the cost and complexity of CC & C solutions, with simplified delivery of alarm notifications.

ARC for Zebra – Key Features

Support Nursing Workflows

To keep track of incoming notifications, ARC provides a simple list of pending alarms. Nurses can adjust their priorities and routes to maximize efficiency.

One-button call back to patient room

To stall an imminent bed exit, or let the patient know the nurse is on the way, a “call now” button helps to improve Average Voice Response metrics, safety and patient satisfaction

Priority Notification Tones

Urgent alarms produce a different tone to signal the need for immediate action.

Fast Notification Delivery

The system is built to streamline alerts,generally delivering a notification in approximately 3 seconds from initiation.

Alairo ARC

Alarm Receiver and Communicator

Deliver a better experience

A highly visible application

Nurses can experience hundreds of alarms in a single shift. Delivering an application that makes their job easier significantly elevates the partner's importance and value to the hospital.

Aligning with key initiatives like Average Voice Response (AVR) and Average Staff Response (ASR) acceleration programs improves the clinical relevance of your organization.

Informatics Support

Alairo ARC can be paired with Alairo Insights, an alarm management SaaS application that aggregates alarm information from multiple systems and produces dashboards and reports to optimize the alarm environment.

From staff performance, staff mix, response times, time-in-room, quiet-at-night and other common hospital initiatives, Insights simplifies analysis and delivers actionable data to nursing management, Hospital Quality teams and the informatics function

Deployment and Long-term Support

Resources are available to Zebra partners to support your discussions with clinical staff, as well as technical integration into hospital communication systems.

Beyond deployment support, Alairo Solutions will help your team make key clinical connections to provide visibility to key initiatives and enable additional sales. We remain available to your team as a knowledge and support resource.

Customer Satisfaction

One consistent theme across the health care field is the need to get the most value out of every investment.

Zebra hardware is optimized for demanding, challenging environments, but to maximize the value of the customer's investment, the application suite needs to seamlessly integrate into natural workflows and improve efficiency.

The ARC offering eliminates the disruptive, context-lacking alarm notifications typical of standard Nurse Call mobile messaging with a rich, easy to manage interface.

The Alairo Platform connects multiple applications and data sources in the healthcare enterprise, enabling more comprehensive solutions to today's healthcare IT and communications challenges.
